

**Finally, an e-mail server which is not a PC.
Management of all e-mails, based on flash
memory technology.
Unbeatable in price. Compact, secure, noise-
less. Independence from a provider and
world-wide access to your own e-mails at
any Internet terminal.**

Unrestricted and secure management of your e-mails begins here. Due to new flash memory technology it has now been possible to produce an e-mail server which is not only compact, efficient and unbeatable in price, but also absolutely virusproof.

Fourteen advantages of NCT's embedded e-mail server:

Management of all e-mails, based on flash memory technology

Absolutely virusproof since there is no operating system

Attachment manager prevents reception of unwanted e-mails

Built in configurable http server

All operating functions needed for e-mail in one single device

Optimal use of the available flash memory through the dynamic management of the e-mail accounts

Easy installation, no technical assistance needed

World-wide access to your own e-mails at any Internet terminal

Independence from a provider

Unlimited number of user accounts (recommended for up to 200 accounts)

Noiseless (no moving parts)

Unbeatable price and no running costs

No heat generation

Nifty and compact

Performance specifications:

Dynamic & static DNS

Protocols: ESMTP, POP3, HTTP, DHCP, NTP

Management of several e-mail domains

Unlimited number of user accounts

Multidrop (support for mail queues)

SMTP authentication

Spam filter (URL/e-mail white list, URL/e-mail black list)

Option of restricting the e-mail memory usage per user

Extension filter (e.g. *.exe, *.vbs)

Mail relaying, intern/extern

Mail sharing

Autoreply (informational texts for each individual user)

Webmail (requires permanent internet access)
